INTRODUCTION

This report provides the necessary information for planners engaged in training and employment-related assistance. The Annual Planning Report (APR), formerly the Annual Manpower Planning Report, is prepared annually for dissemination to planners. Because of the data availability for areas less than the State, all areas as required by regulations are presented in this report. Appendices are provided for lengthy tabulations and materials necessary for planners, but not significant for inclusion in the main report. At the end of each section is a page referring to appropriate appendices.

I. HIGHLIGHTS AND CONCLUSIONS

Montana, the fourth largest state in land area, ranked 42nd in total population according to the 1970 Census. Employment levels have increased at a slower rate than the U. S. average, while the unemployment remained consistently higher. The percent of families below the poverty level in Montana was 10.4%, slightly lower than the U. S. average of 10.7%.

Significant findings in this Annual Planning Report for fiscal year 1977 include higher labor force participation rates - particularly among females, an increasing population and civilian labor force, high unemployment rates among non-whites and white females, and high unemployment in the veterans group. Of those employed part-time for economic reasons, whites account for 95% and non-whites the remaining 5%. Males and females are about evenly distributed with 49.3% and 50.7% respectively. The total number of persons fourteen years old and over with income are distributed with 96.1% for whites and 3.9% for non-whites. The number of economic disadvantaged represents 13.6% of the total population. Of that number, 87.3% are eighteen years old and over.

The nonwhite and female groups displayed the highest unemployment as a percent of total unemployment. Statewide unemployment rates ranged from a high of 47.0% in the nonwhite female age group of 18-19 to a low of 3.9% in the 45-54 age group for white males. The males and whites represented the labor force better than did females and nonwhites.

Of those in need of employment related assistance, there are 90,245 economically disadvantaged statewide with 8,331 in the Rural CEP area and 13,033 employed for economic reasons statewide with 2,340 in the Rural CEP area. Persons 14 years old and over receiving welfare total 13,640 statewide. Special consideration for Vietnam-era veterans should be geared towards the 2,284 unemployed expected in 1977.

Montana has a large number of training facilities, from the University level to On-The-Job-Training (OJT), and from public service assistance to private training. The majority of the public service assistance training is funded through Federal and State programs and includes the Comprehensive Employment and Training Act (CETA), Concentrated Employment Program (CEP), On-The-Job-Training (OJT), Job Corps, Public Service Employment (PSE), and Work Incentive Program (WIN).

II. DESCRIPTION OF AREA FISCAL YEAR 1977

A. Montana, geographically located in the northwestern United States, is bordered by Idaho on the west, Wyoming on the south, North Dakota and South Dakota on the east, and Canada on the north. There are fifty-six counties in Montana which range in population from 619 to 98,900. The average county population is 13,581, but forty-three counties have population less than this average. Sixteen counties have population less than 3,000 and only three counties have population in excess of 50,000.

B. Rural CEP area is composed of the counties of Lewis and Clark, Jefferson, Broadwater, Silver Bow, Deer Lodge, and Meagher. This area is located in the central western part of Montana. The total population for this area is 109,369 and represents 14.4% of the State's population.

C. Cascade County with a population of 85,803, is bordered on the west and south by the Rural CEP area. Great Falls, one of Montana's principal cities, is located in Cascade county. This county has been selected as Standard Metropolitan Statistical Area.

D. Yellowstone County, with a population of 98,900, is located in the southern central section of Montana. Billings, the largest city in Montana, is located in Yellowstone County. This county has also been selected as a Standard Metropolitan Statistical Area.

E. Balance-of-the-State is described as all counties not belonging to the Rural CEP area. This area consists of fifty counties in which Cascade and Yellowstone are included.

III. ECONOMIC DEVELOPMENTS AND OUTLOOK

Recent economic developments have plagued Montana's lumber and wood products and metal mining industries. The results have carried into other industries. The layoffs in metal mining were a result of poor performance by the largest metal mining company in Montana. Lumber and wood products industries have been affected by the recession. Although the nation is coming out of the recession Montana has had a history of lagging in recovery, and is expected to recover six to twelve months after this one.

Agriculture is still Montana's basic industry but the prices received by farmers are far more important for economic reasons than are employment levels. Present indications are that prices will increase over present levels for fiscal year 1977 with no major technological changes to affect employment levels.

New economic developments include the energy related industries, with proposals for more coal export, power generation, coal gasification, and a magnetohydrodynamics facility. These developments will probably not be completed during fiscal year 1977, but the planning and construction could create an optimistic situation for the services and trade industries to expand further.

Employment levels should continue to increase, but with more people expected to enter the labor force, the unemployment rate during fiscal year 1977 should remain high.

IV. POPULATION AND LABOR FORCE CHARACTERISTICS AND TRENDS

Montana's population is expected to increase 9.5% during the 1970 to 1977 period; however, seventeen counties are expected to show decreases. Five counties are expected to increase greater than 25%. They include Jefferson (51.5%), Rosebud (43.3%), Ravalli (38.0%), Mineral (34.6%), and McCone (28.3%).

Population composition changes for Montana during the 1970 to 1977 period show the greatest change in the non-white females (12.0%) and the least change in white males (8.7%). Non-white males changed 10.0% and white females 10.2%. Large increases were noted in the 0 to 4 years of age groups for white males (45.2%) and females (44.4%). Non-white males increased 52.0% in the 55 to 59 age group and non-white females 72.7% in the 60 to 64 age group. A decrease in the 5 to 9 age group was recorded for all races and sex.

The Labor Force increased greater than 50.0% for females of all races and non-white males. White males displayed a modest increase of only 14.8%. Of the working age population, the white males continue to dominate the labor force with non-white females being the less dominant. Males participate in the labor force 77.5% as compared with females at 52.2%.

Montana's Rural CEP area is expected to increase 8.6% in population over 1970 census levels. The non-white population is expected to increase 31.9% while the white population should increase only 8.5%. The male population should increase 7.9% and female population 9.3%. The 20 to 24 age group

shows the largest population increase and the 50 to 54 age group the least amount of growth for all races and sex.

Jefferson County has been the fastest growing county since 1970 with an increase of 51.5%. The increase in this county is attributed to being located between Butte and Helena. These two cities provide many jobs and are within easy commuting distance of all counties in the Rural CEP area. Other major cities in the area include Anaconda and Deer Lodge.

V. INDUSTRY EMPLOYMENT OUTLOOK

Total employment is expected to increase between 50,000 and 60,000 workers during the 1970-1980 decade, depending on the level of coal development. Agriculture is not expected to change significantly from the 1970 level and should remain stable through 1980. All other industries will increase, with the services and wholesale and retail trade industries the volume leaders.

The level of coal development will determine the size of increases and the number of openings in each industry. For example, public utilities and sanitary service will increase only 7.8% during the decade under no coal development, but could increase as much as 60.5% under full scale coal development. Even with full scale coal development, mining could continue to decrease because of present trends in metal mining. Manufacturing, Federal administration and agriculture are not affected by coal development.

A. Agriculture, Forestry, and Fisheries - Agriculture, Montana's largest export industry, has for many years been the foundation of Montana's economy. Agriculture is still important as far as the revenue it provides the State, but is becoming less important as an employer. Agriculture is becoming more mechanized, producing more, and requiring less manpower. Agriculture is not expected to grow in terms of employment, but normal attrition will still require workers in this industry.

B. Mining - Mining employment since 1940 has shown a continuous downward trend and present layoffs in metal mining will continue this trend or level off, even with full scale coal development.

C. Contract Construction - While seasonal employment changes are very extreme, average annual employment levels since 1949, when plotted graphically, form a nearly horizontal line. This fact is in spite of large short-term construction projects such as the Minuteman Missile Project, Yellowtail Dam, Libby Dam, Interstate Highway, etc. This trend is expected to continue through 1980, with large short-term construction projects in the building of power generation plants, gasification complexes, constructing strip mine facilities, and equipment erection. By 1980 these construction projects should be complete and the trend will start to fall in line again. All sub-industries of contract construction are expected to show increases during the ten-year period 1970 - 1980 under each development forecast.

D. Manufacturing - Manufacturing in Montana, for the most part, is confined to lumber and wood products, primary metals, and food and kindred products. These three industries combined account for more than 70% of total manufacturing in Montana. Manufacturing growth has been slow and steady for the last ten years and this trend is expected to continue, even with present economic conditions. Coal development will not have any significant effect on manufacturing.

E. Transportation, Public Utilities and Communications - Railroad transportation has been declining for the past twenty years, mainly due to reduced passenger service; however, this trend is expected to reverse by 1980 as a result of the increased need for trains to transport coal.

Public utilities were expected to show only moderate increases, but with coal development requiring more power generation plants, and possible gasification complexes, larger increases in public utilities can be expected. Electric light and power and electric-gas utilities are the industries expected to show the largest increases due to coal development. New energy generation facilities are now in the planning stages.

F. Wholesale and Retail Trade - The wholesale and retail trade industries are expected to increase significantly during the ten year period 1970-1980. The wholesale industry is expected to show growth in all categories, with leading increases in farm products, raw material and lumber and construction materials. The retail industry will also show increases, but not as large as wholesale. Volume leaders will be general merchandise industries, food and dairy stores, possibly auto dealers and gas stations (depending on future energy crisis), and eating and drinking places. Coal development will further generate increases in this industry.

G. Finance, Insurance and Real Estate - Although this industry is linked to the increase in population, real estate speculation will be on the rise.

H. Services - In recent years the availability of money and more leisure time has increased the demand for services of all kinds. The obvious result was a dramatic increase in the number of jobs in these fields, particularly those which are tourist oriented. Montana has been able to capitalize on its recreational resources, beauty, and environmental setting. The service industry, because of this and coal development, is expected to show large increases over the 1970 level of 40% to 43% by 1980.

I. Government - Government is expected to show a significant increase during the ten year period, with emphasis on local government.

FEMALE EMPLOYMENT BY INDUSTRY

Female employment in Montana averaged 96.6 thousand workers in 1975 an increase of 5.7% over the 1974 level of 89.5 thousand. Women workers have shown increases in the manufacturing, transportation and public utilities, trade, services, and government industries while maintaining employment levels in the other industries. Women are expected to represent 41.0% of the civilian labor force by 1977.

The "Tax Reduction Act of 1975" has raised the maximum income a working couple may earn to \$35,000 and still be able to deduct maximum child care expenses from their taxable income. This may encourage more mothers of young children, especially those mothers with higher levels of education, to remain in or return to the labor force while their children are still young. This trend could be further accelerated by the provision of more and better day care facilities.

VI. Employment by Occupation: 1980

In recent years the occupational mix of Montana's labor force has shifted from blue collar and farm oriented occupations to white collar and service oriented occupations. Job opportunities in most professional and service occupations will be good to excellent in the period from 1975 to 1980. Craftsman and operative occupations, while declining as a percent of total employment will continue to provide many job opportunities, especially if extensive coal development occurs.

A. The Professional, Technical and Kindred group is Montana's largest occupational category. An expected 50,540 workers will be in this group by 1980 with coal development adding another 820 workers. Average annual job openings will be 2,880 openings each year with coal development.

B. The Managers, Officials, and Proprietors occupational group will increase by 34.8% during the 1970-1980 period with coal development. Average annual job openings will be about 2,000 per year.

C. Sales Workers will increase 4,180 workers during the decade and will provide 1,150 openings per year.

D. Clerical Workers will number 45,770 total jobs by 1980, an increase of 29.1% from 1970. Average annual openings will number 3,170.

E. Craftsmen, Foremen, and Kindred workers will provide 1,290 openings per year through 1980. Coal development will be directly responsible for increased openings in this occupational group. Total employment of this group will be 38,930 by 1980.

F. The outlook for the Operatives occupational group will benefit the most from coal development. Average annual openings will be 1,060 and total employment will be 32,330, an increase of 15.7% from 1970 levels.

G. Service Workers will provide more average annual job openings than the other groups with 3,640 openings each year and will be the second largest occupational group with 49,780 workers in 1980. This group will account for 15.6% of total employment.

H. The Laborers occupation group is the smallest category in Montana with 11,420 workers forecast for 1980. This represents 3.6% of total employment. Average annual openings will number 320.

I. The Farmers and Farm Managers group is expected to remain stable through 1980 with coal development having a minimal effect on this group. Mechanization and improved technology will account for the changing occupational structure within this group during the decade.

VII. RECENT TRENDS IN UNEMPLOYMENT

During 1974, Montana's unemployment rate was significantly higher than that of the nation. This was mainly due to the seasonality of Montana's labor market and the stable condition of the nation's economy. However, during 1975, the nation experienced the recession in more severity than did Montana. Unemployment rates for both exceeded 8% with the nation averaging 8.5% and Montana 8.1%.

The Rural CEP area during 1974 reacted much the same as the nation and had an unemployment rate less than did the average for Montana. During 1975, the recession and layoffs in the Rural CEP area increased the unemployment rate to exceed the state average. Because of the stable employment of state government, the Rural CEP area was not affected to a greater extent.

The Balance-of-the State followed the direction of the state average in both years. This is probably best explained as the state unemployment rate being weighted more by the counties not belonging to the Rural CEP area.

Yellowstone County exhibited the lowest unemployment rate of the required labor market areas to be presented. Coal development and expanding trade and service industries were primarily responsible for a positive balance as compared to other areas.

Cascade, as with the Balance-of-State, has had an average unemployment rate close to the statewide average.

Unemployment trends should continue to improve in all areas of the state. This trend will be the result of the recession fading away. Energy development in the Yellowstone County area will provide more jobs and should reduce the unemployment rate further. Again, Yellowstone County should produce lower than average unemployment rates.

SOCIO-ECONOMIC CHARACTERISTICS
AND NEED FOR
EMPLOYMENT RELATED ASSISTANCE

In addition to characteristics of the unemployed in Section IV and Section VII there is need to know the socio-economic characteristics of the population in relation to a need for employment-related services. This section provides that information. With special emphasis on the Vietnam-Era Veterans a special section following the tables is provided for the Veterans group.

Montana has a total of 13,033 individual employed part-time for economic reasons with the Rural CEP area accounting for 2,340 or nearly 18%. Males and females were closely distributed, but the whites accounted for most of the total. Of those 14 years and over receiving welfare payments, the Rural CEP area accounted for 1,872 of the total 13,640 individuals statewide.

The economically disadvantaged totalled 103,319 statewide and 12,163 in the Rural CEP area. However, of that number, it is estimated that those persons under 18 years old would not be likely to seek employment-related assistance. The estimated number seeking employment-related services statewide is 90,245 with 8,331 in the Rural CEP area. The number of unemployed Vietnam-Era Veterans is forecast to be 2,284 with 345 in the Rural CEP area in 1977.

VETERANS AND VIETNAM-ERA CHARACTERISTICS

INTRODUCTION

The various tables in this section on characteristics of Montana's male veterans are largely based on data from the last U. S. Census of population, since this is the latest available source of information of any detailed nature. At that time there were 99,983 veterans in Montana, of which 16,556 were Viet Nam-era veterans. However, from the latest Employment Security estimate for July 1974, the number of veterans in Montana rose to about 108,900. The number of Viet Nam-era veterans climbed to 27,000.

Total number of Veterans (Census)	99,983
Deaths	4,200
In-migration	2,700
New Veterans	10,400
Total number of Veterans (1974)	108,900

Of the 99,983 male veterans in Montana, 54,866 were from urban areas and 45,117 were from the rural areas of Montana. Married veterans totaled 81% and 6.7% were widowed or divorced.

In terms of education, the average (median) veteran has completed 12.4 years of school; 37.5% of the veterans had completed high school and 7.5% or 7,510 had completed 4 years of college.

There were 86.2% of the veterans in the labor force and 81,534 or 81.5% of them were employed. The unemployment rate for veterans was 5.4% compared with 7.9% for all males 16 years and older.

Labor Force	86,149
Employed	81,534
Unemployed	4,615
Rate (percent)	5.4%
Not in Labor Force	13,834

TABLE A VI

1970 RURAL CEP POPULATION BY RACE

Total Population	<u>100,644</u>	<u>100%</u>
Spanish American	1,297	1.3%
Negro	237	0.2%
Indian	1,183	1.2%
Japanese	39	*
Chinese	51	*
Filipino	26	*
Other	153	0.2%

* less than 0.1%

FOOTNOTES

- 1/ These data were produced from the second and fourth counts of the 1970 Census of Population as this is the only source of this type of information currently available.
- 2/ The 1970 Census of Population enumerated Spanish-American as mostly white but also some Negroes and other races.
- 3/ Includes all other racial groups not elsewhere classified, such as Hawaiian, Korean, Aleut, Eskimo, Malayan, Polynesian, etc.
- 4/ Includes those persons living within the Montana boundaries of Yellowstone National Park.
